27 CHECKED CLAIMS

EN / FR / PT

WHY I BUILT THIS

Coming back from Ibadan, police stopped me and took me to their station. They asked for ₦100,000. I talked them down to ₦50,000, and they told me to pay by POS so there would be no paper trail.

My offence was driving on a learner's permit instead of a full licence. I felt guilty, so I paid.

Further along the road to Ife, FRSC stopped me and asked for their fine as well. They told me I should never have paid the police, because a licence is FRSC business. What the police may ask for is vehicle particulars. Mine were complete and up to date.

₦50,000

WHAT I PAID, BY POS, WITH NO RECEIPT

₦10,000

NRTR 2012, REG. 74(2), AND ONLY ON CONVICTION

0

TIMES "CHECKPOINT" APPEARS IN THE POLICE ACT

THREE THINGS WERE WRONG. AT THE ROADSIDE I COULD CHECK NONE OF THEM.

THE PRICE

₦50,000 demanded. The Regulations set ₦10,000, and only on conviction. The phrase **liable on conviction** appears 62 times in them. A court fines. A roadside does not.

NRTR 2012 · **reg. 74(2)**

THE CHANNEL

Paid by POS so nothing was written down. Every lawful movement of money in the Police Act is a recorded one. A recognisance is entered into and written down. Seized property is inventoried, signed, and a copy given to you.

Police Act 2020 · **s.62(2), s.46(1) to (3)**

THE JURISDICTION

FRSC said the licence was theirs, not the police's. The word **checkpoint** does not appear anywhere in the Police Act 2020. Neither does roadblock.

WHO THIS IS FOR

Anyone driving in Nigeria who is stopped and told a number. The published law exists, in PDFs nobody reads at the roadside, so folk law fills the gap. Everybody knows a rule. Nobody can check one.

20 seconds

TO DECIDE WHETHER TO PAY

IT PICKS A CHECKED ANSWER. IT NEVER WRITES ONE.

The model returns a probability across 27 claims a human checked against the Police Act 2020 and the National Road Traffic Regulations 2012. Every word on screen comes from a reviewed file. There is no step where text is generated, so the usual failure of a language model, a fluent wrong answer, cannot happen here.

When nothing checked applies it says so and names a complaint line, rather than showing the nearest card.

PIPELINE

speech or typing → 384-d vector → 6 typed questions

→ gate: who stopped you, what they say you did

→ one-vs-rest over 27 claims, so "none" is sayable

→ cited rules → screen

OUT-OF-FOLD ACCURACY

ONE PACK PER JURISDICTION. THE APPLICATION DOES NOT CHANGE.

A pack holds the claims, the citations, the thresholds and the head trained on them. Nigeria is one directory. Kenya or Senegal is another, written by people who know that law. Swapping the pack swaps the jurisdiction, and the engine, the gate and the abstention behaviour carry over untouched.

LANGUAGE IS PART OF THE DESIGN

English, French and Portuguese, across the interface, the claims, and speech in both directions. The encoder is multilingual, so which claim applies is decided from meaning and not from the language it arrived in.

in-language accuracy · EN **0.862** · FR **0.840** · PT **0.841**

The quoted statute is never translated. Nigerian law is enacted in English, and a translated quotation is a paraphrase wearing quotation marks.

BUILT AND CHECKED

23.7 MB app · encoder copied by cable or fetched once, hashed every start

513 phrasings · **16** tests on the JVM · ECE **0.011**

every claim carries instrument, section and capture date

FRENCH REASONING, ENGLISH STATUTE

Knowing the fine is ₦10,000 ends a negotiation. Reciting your rights escalates one. The useful thing at a roadside is the real number and the lawful way to pay it.
